Training run report: data320k-b8-t1024-e512h8-40k-lr6e-4-wu256k

Run `20260930-170318-13f3574-dirty-data320k-b8-t1024-e512h8-40k-lr6e-4-wu256k` · checkpoint `modal_data320k-b8-t1024-e512h8-40k-lr6e-4-wu256k_steps40000_seed42.pt` · generated 2026-10-09 17:21 UTC. A decoder-only Transformer language model (GPT-2 tokenizer, 50,257 tokens) trained from scratch; every number below is from the project's fixed evaluation harness, identical across models. Lower loss is better; the glossary at the end defines each metric.

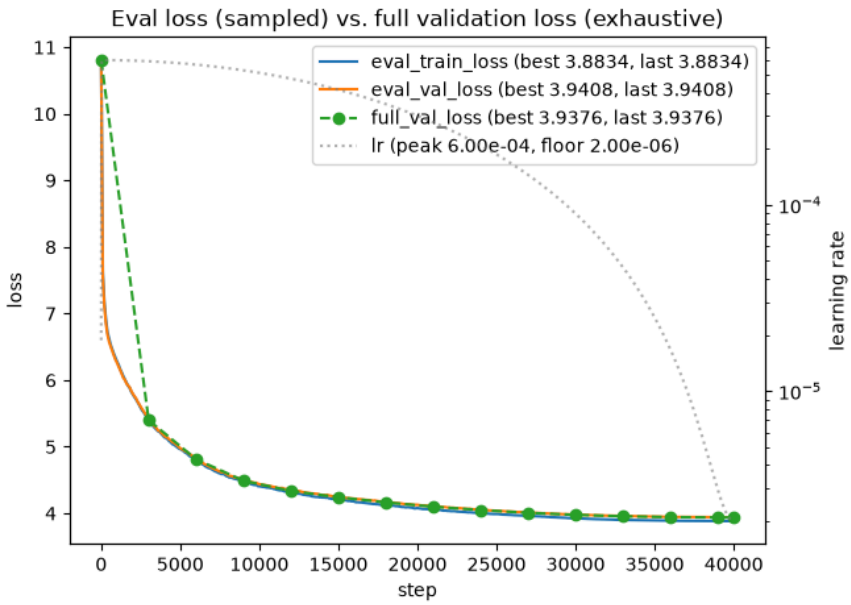

Headline

metric	value

data160k · d256-L4 · 16.3M · T1024 · 40K steps	4.1141	4.0407	59/100	0.538	26/100	25%	63%	48%

Dataset: data320k

```
# data320k

Built 2026-09-30. Train is new; **val is data20k's, byte for byte**, the same
measuring stick as data20k, data40k, data80k and data160k.

| file | tokens | docs | sha256 |
|---|---|---|---|
| train.pt | 316,231,039 | 320,000 | `513239cc0b5b862af4cb53b0157573f9e3e9a6d08dab7ddde62a95869ec51b64` |
| val.pt | 918,728 | 937 | `28b1041acaa527ac6d7e0a464b07115e766c5bf76252ecbc56a8519de02569ee` |

How it was made:

```bash
uv run mini-llm-prepare-data --num-examples 320000 --val-examples 1 --seed 0 --out-dir <tmp>
# keep <tmp>/train.pt; discard its 1-doc val
cp -p data/data20k/val.pt data/data320k/val.pt
```

Verified:
- data160k/train.pt is an exact prefix of data320k/train.pt (one seed-0 scan
  order: 20k ⊂ 40k ⊂ 80k ⊂ 160k ⊂ 320k).
- val.pt is identical to data20k/val.pt.
- 0 of the 937 val docs appear in train.pt
  (`python -m mini_llm.token_overlap data/data320k/val.pt --exclude data/data320k/train.pt`).

At the 327.68M-token budget (B8 × T1024 × 40K) this is ~1.04 passes, against
~2.06 over data160k at the same budget.
```

Glossary

metric	meaning
full_val@c	Mean next-token loss (nats) over every token of the fixed 918,728-token validation set, in windows of c tokens. Lower is better. full_val@1024 is the headline number.
L(c)	Fixed-target context curve: loss on the same 8,000 target tokens given exactly c tokens of history. Comparable across models at equal c.
cb@W	Context benefit: loss with the real preceding W/2 tokens vs. a prefix from a different document, on identical windows. Nats of help from relevant context (± standard error).
retrieval@d	Forced choice among 10 candidates (chance 10%): can the model pick the token that appeared d tokens earlier? Tests using information far back in context.
degenerate	Samples (of 100) that end in an exact loop OR have rep4 >= 0.5, with its 95% CI. The headline repetition number: exact loops alone miss repetition that never settles into a verbatim cycle.
rep4	Share of repeated 4-grams in a generated sample (0 = no repetition). Median over 100 samples; also counted at >= 0.3 / 0.5 / 0.7.
near-loops	Samples whose tail repeats: from some token on, every 64-token window has rep4 >= 0.5. Onset = where that tail starts (median).
exact loops	Samples (of 100) that end in a verbatim repeating cycle of at least 32 tokens, with its 95% CI. A strict subset of the degenerate samples.
topic held	Share of samples still mentioning the prompt's subject near the end of the 256-token generation.
distinct-2 / -4	Distinct bigrams / 4-grams over total, a diversity measure.
generation protocol	20 frozen prompts x 5 seeds, 256 new tokens, temperature 0.7, top-k 40, stop at EOS; identical for every model.

```
Photosynthesis is a process that we can explore with its advantages. It is the most important type of plant which comes with its benefits.
So, what is a plant that is essential for?
The plant that is used to grow plants is the main food source of the plant. Plants rely heavily on chemical fertilizers and nutrients to make
food.
So, what is a plant that is used to grow plants?
So, what is a plant that is designed to grow plants?
A plant that is used to grow plants is called the plant that is used to grow plants. Plants use their fertilizers and their nutrients to
create food.
What are the characteristics of plants?
The plant that is used to grow plants include:
- Seeds: This is used to grow plants and plants to grow plants.
- Plants: This is used when plants use a mixture of various nutrients and nutrients.
- Plants: This is used when plants use an enzyme to make food.
What are the characteristics of plants?
The characteristics of plants that are used to grow plants are:
- They are used when plants are used to grow plants.
- They are used when plants are used to grow plants.
- They are used when plants are used to grow plants.
- They

Photosynthesis is a process that is characterized by an energy-efficient, renewable energy source that provides various advantages.
The conversion of energy from the primary and secondary sources of energy into the primary and secondary sources of energy into the primary
and secondary sources of energy are the main sources of energy.
The primary sources of energy are energy and energy. As the primary sources of energy are the primary sources of energy, the primary sources
of energy are energy and energy.
Natural sources of energy are energy. These sources are renewable sources of energy, such as coal and oil. These sources are essential for
electricity production.
Energy is also very important for the secondary sources of energy. These sources of energy are energy and energy, which are mainly used to
produce energy.
Energy is also important for the secondary sources of energy that are energy efficient.
Energy is also important for the secondary sources of energy. It is important to note that the primary sources of energy are energy source
and energy.
Energy is used to generate energy. It is used to generate energy by generating electricity from the primary source to energy.
Energy is used to generate electricity. This allows the secondary sources of energy to generate electricity.
Energy is a renewable energy supply. It is used to generate electricity from the primary source in the primary and

Oxygen is a chemical element with a chemical element. The name for a chemical element is a chemical element, which produces an element, which produces an element in its properties.
In the name of the chemical element, the chemical element is a process that produces an element. The chemical element is a chemical element, which produces a chemical element, which produces an element.
Chemicals are the chemical element that produces an element in its properties.
Chemicals are the chemical element, which is a chemical element and is in its properties.
Chemicals are the catalysts that produce an element.
Chemicals are the chemical elements that produce an element.
Chemicals are the chemical elements that produce an element which is an element which is an element.
Types of chemical elements, the chemical element, and the chemical elements, the chemical element, the chemical elements, the chemical elements, the chemical element, the chemical elements, the chemical element, the chemical elements, the chemical elements, the chemical elements, the chemical element, the chemical elements, the chemical elements, the chemical elements, the chemical elements, the chemical elements, the chemical elements, the chemical elements, the chemical element, the chemical elements, the chemical elements, the chemical elements, the chemical elements, the chemical elements, the chemical elements,

Oxygen is a chemical element with a substance called carbon, and is a chemical element.
A substance called carbon is a chemical compound that contains a substance called carbon. Carbon is a chemical element with a complex chemical compound called carbon.
A substance called carbon is a chemical element with a chemical compound that contains an element in an atom.
It is a compound that has a chemical element in a physical form. Carbon is a chemical element with a chemical formula and a group of molecules called carbon.
The chemical compound is a chemical element with a chemical compound that forms carbon atoms.
A substance is a chemical compound with a chemical compound that is a chemical compound.
A substance called carbon is a chemical compound.
A substance called carbon is a chemical compound in the form of a chemical compound.
A substance called carbon is an organic compound with a chemical compound that has a chemical compound called carbon.
Covalent compounds are compounds that have a chemical compound called carbon.
A substance called carbon is a chemical compound that is a chemical compound.
Covalent compounds are a chemical compound that is a chemical element with a compound that is a chemical substance.
A substance called carbon is a compound called carbon.
Covalent compounds are substances that can be used for chemical reactions.

Oxygen is a chemical element with a few elements, but not a molecule or molecule. In some of the elements, a molecule is a substance that is not reactive to carbon.
2. When you think of a molecule, you are trying to find a molecule in your cell. This means that the action of a molecule is to select one molecule from the molecule.
3. When you think of a molecule to work by a molecule, you can do it by simply selecting the one you want to make sure you have the right molecule.
4. When you think of a molecule, you can do it by combining it into your cell.
5. When you think of a molecule, you can do it by using a molecule.
6. When you think of a molecule, you can do it by using a molecule, you can do it by combining it into your cell by using a molecule, a molecule, or a molecule, you can do it by doing it by using a molecule.
6. When you think of an atom, you can do it by adding it to your cell by adding it to its original form.
7. When you think of a molecule, you can do it by using a molecule.
7. When you think of a molecule, you can use it

Oxygen is a chemical element with a variety of different types. It is found in the plant-based products of different types, including:
- Biomass: It is known for its ability to conduct chemical conversion with various other types of chemicals.
- Biomass: It is highly resistant to various chemicals and the use of different types of chemicals to meet the needs of various types of chemicals.
- Biomass: It is highly resistant to environmental chemicals, such as UVB and CO2, which are toxic to many types of chemicals.
- Biomass: It is a highly resistant to chemical reactions that are known to be active in the body.
- Biomass: It is highly resistant to environmental chemicals, such as:
- Biomass: It plays a vital role in the environment and reduces environmental toxins.
- Biomass: It is highly resistant to environmental chemicals, such as pesticides and pesticides.
- Biomass: It is resistant to environmental chemicals, such as methane, nitrogen, and ozone.
- Biomass: It is highly resistant to environmental chemicals and is resistant to environmental toxins.

In this lesson, students will learn how to make a positive impact on students' success.
At the end of the lesson, students will learn to identify the impact that they have. The lesson will be based on the findings of the following:
- Create a new school environment that is safe for students and their families.
- Use a range of activities that are enjoyable to engage students in class activities and have the opportunity to engage with their students.
- Consider taking a positive role in class activities, such as reading, writing, or writing as a way of expressing a gratitude or understanding about a topic.
- If the lesson is written by the students, it will be interesting to choose to create a positive impact on the students.
- Discuss the importance of positive and negative feedback for students to support their students' success.
- Ask students to use a range of activities, such as using a specific activity.
- Ask students to use a variety of activities, such as activities, activities, or activities.
- Explain the importance of positive and positive feedback for students.
By using the lesson, students can be more easily accessed than traditional activities.
One of the key benefits of positive and negative feedback for students is the ability to make positive changes during class activities.
Another benefit of positive and
