Training run report: data320k-b8-t1024-e512h8-80k-lr6e-4-wu256k-rope

Run `20261007-181107-99f8a81-dirty-data320k-b8-t1024-e512h8-80k-lr6e-4-wu256k-rope` · checkpoint `modal_data320k-b8-t1024-e512h8-80k-lr6e-4-wu256k-rope_steps80000_seed42.pt` · generated 2026-10-09 17:21 UTC. A decoder-only Transformer language model (GPT-2 tokenizer, 50,257 tokens) trained from scratch; every number below is from the project's fixed evaluation harness, identical across models. Lower loss is better; the glossary at the end defines each metric.

Dataset: data320k

```
# data320k

Built 2026-09-30. Train is new; **val is data20k's, byte for byte**, the same
measuring stick as data20k, data40k, data80k and data160k.

| file | tokens | docs | sha256 |
|---|---|---|---|
| train.pt | 316,231,039 | 320,000 | `513239cc0b5b862af4cb53b0157573f9e3e9a6d08dab7ddde62a95869ec51b64` |
| val.pt | 918,728 | 937 | `28b1041acaa527ac6d7e0a464b07115e766c5bf76252ecbc56a8519de02569ee` |

How it was made:

```bash
uv run mini-llm-prepare-data --num-examples 320000 --val-examples 1 --seed 0 --out-dir <tmp>
# keep <tmp>/train.pt; discard its 1-doc val
cp -p data/data20k/val.pt data/data320k/val.pt
```

Verified:
- data160k/train.pt is an exact prefix of data320k/train.pt (one seed-0 scan
  order: 20k ⊂ 40k ⊂ 80k ⊂ 160k ⊂ 320k).
- val.pt is identical to data20k/val.pt.
- 0 of the 937 val docs appear in train.pt
  (`python -m mini_llm.token_overlap data/data320k/val.pt --exclude data/data320k/train.pt`).

At the 327.68M-token budget (B8 × T1024 × 40K) this is ~1.04 passes, against
~2.06 over data160k at the same budget.
```

Glossary

metric	meaning
full_val@c	Mean next-token loss (nats) over every token of the fixed 918,728-token validation set, in windows of c tokens. Lower is better. full_val@1024 is the headline number.
L(c)	Fixed-target context curve: loss on the same 8,000 target tokens given exactly c tokens of history. Comparable across models at equal c.
cb@W	Context benefit: loss with the real preceding W/2 tokens vs. a prefix from a different document, on identical windows. Nats of help from relevant context (± standard error).
retrieval@d	Forced choice among 10 candidates (chance 10%): can the model pick the token that appeared d tokens earlier? Tests using information far back in context.
degenerate	Samples (of 100) that end in an exact loop OR have rep4 >= 0.5, with its 95% CI. The headline repetition number: exact loops alone miss repetition that never settles into a verbatim cycle.
rep4	Share of repeated 4-grams in a generated sample (0 = no repetition). Median over 100 samples; also counted at >= 0.3 / 0.5 / 0.7.
near-loops	Samples whose tail repeats: from some token on, every 64-token window has rep4 >= 0.5. Onset = where that tail starts (median).
exact loops	Samples (of 100) that end in a verbatim repeating cycle of at least 32 tokens, with its 95% CI. A strict subset of the degenerate samples.
topic held	Share of samples still mentioning the prompt's subject near the end of the 256-token generation.
distinct-2 / -4	Distinct bigrams / 4-grams over total, a diversity measure.
generation protocol	20 frozen prompts x 5 seeds, 256 new tokens, temperature 0.7, top-k 40, stop at EOS; identical for every model.

```
Photosynthesis is a process that begins in the plant roots.
The plants that build up the food chain contain the carbon so that it can be converted to photosynthesis.
The carbon fibers that make up the food chain are used as food additives, by absorbing carbon dioxide
into the plant.
Carbon dioxide is created by dividing the plant by the carbon dioxide in the plant.
This means that if the plant is too large, the carbon dioxide in the plant will not be absorbed by the
plant and will not be absorbed by the plant.
The carbon dioxide in the plant is called CO2.
The carbon dioxide in the plant is called CO2- or CO2.
Some plants are called CO2- or CO2-based, so they must be converted to photosynthesis by the plant.
This is called CO2-based, because the plant absorbs CO2 using the CO2-based process.
The carbon dioxide in the plant is called CO2-based, because CO2 is converted to CO2 by the plant to
photosynthesis.
The CO2 in the plant is called CO2.
Carbon dioxide is a greenhouse gas free of carbon dioxide.
Carbon dioxide comes from plants because it is absorbed by the plant.
The CO2 produced by a

```
Photosynthesis is a process that occurs after the process of photosynthesis.
Photosynthesis is the process by which the sun passes through the interior of the plant and the soil. The soil is called the "plant" or "tree".
The plant takes care of the plant by absorbing sunlight and absorbing it from direct sunlight. The plants need to be able to survive and thrive.
The plant uses light energy to create photosynthesis and is able to process the photosynthesis process by absorbing sunlight.
Humidity is the force in the environment that determines the temperature and the amount of sunlight that plants produce.
Humidity is the force in the soil that regulates the temperature of the soil.
Humidity is the force in the soil that determines the amount of sunlight that plants produce.
The process involves the photosynthesis of photosynthesis by absorbing sunlight.
The photosynthesis process involves the process of photosynthesis by absorbing sunlight.
Photosynthesis is the process by which sunlight is absorbed by plants.
Photosynthesis uses sunlight to produce photosynthesis.
- Photosynthesis uses sunlight to produce light.
- Photosynthesis uses sunlight to produce photosynthesis.
- Photosynthesis uses sunlight to produce photosynthesis by absorbing sunlight.
- Photosynthesis uses sunlight to produce photosynthesis by absorbing sunlight.
- Photos

biography: "Albert Einstein was a German-born theoretical physicist who"

draw 1 · rep4 0.285 · not degenerate · topic held

```
Albert Einstein was a German-born theoretical physicist who was not a physicist who is still considered
one of the most famous physicists in the world.
The Albert Einstein Institute — the first Einstein-born scientist to ever become Einstein's most famous
scientist for decades — was a physicist who was the first Einstein to be accepted for the Nobel Prize in
Physics. Einstein's first scientific prize was Albert Einstein's first, while Einstein's second — Albert
Einstein's first, and Albert Einstein's second — was born in 1945. So, Einstein's first year of
Einstein's first scientific achievement, Albert Einstein, was born in 1961.
Albert Einstein's first two years of Einstein's second, and Albert Einstein's second, were born in 1962.
Einstein was one of the only three scientists to ever become Einstein's first. Einstein's first, but
Einstein's first, and Albert Einstein's second only, was born in 1959. Albert Einstein's first year of
teaching was only the first Einstein to ever become Einstein's second. Albert Einstein's first year of
teaching was only a year after Albert Einstein's first three years of teaching, when he became Albert
Einstein'

```
Albert Einstein was a German-born theoretical physicist who was born in Germany, but he was not a
physicist. His work was published in 1958. He died in 1949. He is credited with the development of a
German-born physicist named Max Planck.
The atomic physicists are not the only scientists, because they are the only scientists of the world and
all the other scientific disciplines in general. The physicists of the Bohr-class-Söppen-Künberg, the
former professor of physics at the University of Berlin, are the first to publish their work on the
atomic physicists.
The first physicists on the atomic physicists were the first to publish their work on the atomic
physicists. They were the first to publish their work on the atomic physicists themselves, in addition to
the first two of these physicists. The first physicists of the two were the first to publish their work
on nuclear physics. The physicists of the Bohr-class-Söppen-Künberg, the first to publish their work on
the atomic physicists themselves, were the first to publish their work on the atomic physicists
themselves.
The first physicists that were published in the German-Jewish journal called the atom-sensing theory was
published in December 1958. The first physicists in the German-Jewish journal called the atom-s

Albert Einstein was a German-born theoretical physicist who studied physics and mathematics in 1905, and a German-born professor of physics at Stanford, who was considered one of the greatest scientists in the world.
On October 1, 1917, Einstein was awarded the Nobel Prize in Chemistry and Physiology to be awarded Nobel laureates for his discovery of the atomic nucleus. Einstein’s ideas were inspired by a combination of theories on the nature of the atom and his ideas in a way that inspired him to think about the atom itself.
In 1917 Einstein’s life was divided into four phases:
- The nucleus, which is the nucleus of the atom and the nucleus of the nucleus
- The nucleus, which is the nucleus of the nucleus
- The nucleus of the nucleus of the nucleus
- The nucleus of the nucleus
- The nucleus of the nucleus
- The nucleus of the nucleus

draw 1 · rep4 0.055 · not degenerate · topic lost

```
Oxygen is a chemical element with a large amount of energy, which can be used to create an electric power grid. The battery is a continuous component of the grid, it is a source of electricity, and it has an important role in the process of the solar system. The solar energy is a powerful energy source that can provide the best possible energy for a wide variety of applications.
In the early days of solar energy, there was a revival of traditional solar cells, which are a result of the use of solar cells. When a solar cell is installed and the solar energy is converted into a hybrid form, the solar cells are equipped with the power that is used to store energy, and the solar cells are powered by solar cells for use in other applications. This process is being adopted in the form of solar cells, which are the basis for the design of solar cells.
In the early days of solar energy, there were only about 4,000 solar cells in the United States. This was the year the United States was on a mission to protect the environment, protect the environment, and make the world’s largest solar cell. This includes solar cells that are used in the United States for storing and storing energy.
The first solar cell was the first solar cell, which was used in the

Oxygen is a chemical element with a few specific ions.
How do I get hooked on my product?
It works by creating a single molecule of the product. The first step in the process is to create a single molecule that matches the molecule’s specific ions. In the second step, the molecule will be used to create a single molecule of the product. The third step is to create a single molecule of the product. The third step is to create a single molecule of the product.
How do I get hooked on my product?
I want to get hooked on my product because of the way my product is being attached to my product. The first step is to create a single molecule of the product. This is the first step: the first step is to create a single molecule of the product.
How do I create a single molecule of the product?
You can create a single molecule of the product by creating a single molecule of the product. This is where a single molecule of the product comes from. The single molecule of the product comes from the first molecule of the product, which is the first molecule of the product.
How do I make a single molecule of the product?
The first step is to create a double molecule of the product. This is the first step

Oxygen is a chemical element with the most common non-chemical element in it. The use of this inorganic compound is particularly important in the development of a chemical element, since it provides the biological element with the ability to make the chemical structure more complex, and thus, the use of this compound in the production of organic compounds is a great way to make the chemical structure more complex.
3. The role of the natural compounds in the production of organic compounds can have many advantages. The most common of these is the combination of natural and natural compounds and their chemical properties are determined by their properties. Natural compounds, on the other hand, are also found as a compound in the production of organic compounds.
A chemical element is a substance in a chemical composition, and its chemical structure is determined by the chemical structure, and its relative strength is determined by its chemical structure. Natural compounds, such as organic acids, are the most abundant element in the biological elements.
5. The use of natural compounds is associated with the development of new chemical elements, such as organic compounds, which are a chemical element of the chemical elements. It is important to understand the nature of natural compounds and to understand the role of the natural compounds in the production of organic compounds.
6. The use of natural compounds as a

Oxygen is a chemical element with a unique role. In the process of hydrogenation, it is a reaction in which the atoms move at different speeds in the process. The two reactions are connected in a way that is consistent with the process. The process of hydrogenation is usually referred to as the “synthesis” process because it is a process that is not specific to the reaction itself. The process of hydrogenation involves a process where the atoms form a hydrogen bond and then bonds a hydrogen bond.
Synthesis is the process of converting hydrogen into oxygen. In the process of hydrogen, the hydrogen atoms form hydrogen bonds. The hydrogen bonds are joined by the carbon dioxide molecules forming the hydrogen atoms. The hydrogen atoms form the hydrogen atoms of the hydrogen atom. The hydrogen atoms form the hydrogen atoms of hydrogen. This atom is used to make hydrogen gas.
Synthesis is the process of finding hydrogen atoms in a solution. The hydrogen atoms in a solution form the hydrogen atoms of the solution. The hydrogen atoms of the solution form the hydrogen atoms of the solution. The hydrogen atoms of the solution form the hydrogen atom of the solution. A hydrogen is a gas that is used to make hydrogen bonds. The hydrogen atoms of the solution form the hydrogen atoms of the solution. The hydrogen atoms

In this lesson, students will learn how to make a positive impact on students' success. Students will be able to use it all in a simple way, using both the benefits of learning.
Students will be able to use the following:
- Be aware of the benefits of learning to students
- Improve their overall achievement
- Improve their overall performance
- Improve mental skills
- Reduce academic stress and anxiety
- Improve academic performance
- Identify and discuss student needs
- Improve communication skills
The lesson plan is a great way to introduce the concept of learning to students in different contexts. Students will learn to work independently, and then learn to work independently and independently. It also includes practice activities such as teaching and learning, and use the concepts as a stepping stone to enhance learning.
Teachers are interested in introducing the concept of learning to students and develop their own skills, which will help them to become more fully engaged in learning. It will also include a greater emphasis on the concepts of learning to be taught, which will help to improve students' learning.
Teaching and learning to students
Students will also be able to use the concept of learning to help them to become more motivated.
Teachers are interested in helping students to develop their learning by using advanced technology and learning to learn. It

To solve a quadratic equation, follow these steps:
1. If we want to solve a quadratic equation, we can then use the formula below to solve it.
2. If we want to solve a quadratic equation, we can use the formula below:
We can solve quadratic equation by using the formula:
- x1 = x2
- x2 = x2
- x8 = x2
We can solve an equation by using the formula below:
Now we have to solve it using the formula:
We have to solve the quadratic equation by using the formula below:
1. x2 = x2 + x2
2. x2 = x2 + x2
3. x2 = x1 + x2
We can solve it using the formula below:
1. x2 = x2 + x2
We have to solve the quadratic equation by using the formula:
n = x2 + x2
We can solve a quadratic equation by using the formula:
n = x1 + y2
We can solve this quadratic equation by using the formula:
n = x2 + x2
We can solve the quadratic equation by using the formula:
n = x2

Although the treaty was signed in 1919, it became known as “The Law of the United States” and was subsequently ratified in 1919.
The two countries were united under the terms of the United States Constitution, which included the Fourteenth Amendment, the Fourteenth Amendment, and the Eighteenth Amendment.
The Fourteenth Amendment was adopted in 1920 by the United States Constitution by the United States Constitution of the United States.
A letter from the Supreme Court that was to be passed in 1920, the Supreme Court determined that the United States Constitution was unconstitutional and that the Court should be held unconstitutional. The court ruled that the Supreme Court would be void in most cases.
In a separate court, the right of the defendant to be convicted was a very important one. The right of the defendant to be convicted could be considered as a part of a person’s right to life.
In the same way, the Supreme Court decided that the Court should be held unconstitutional and that it should be held unconstitutional for the United States.
In addition, the Supreme Court made a decision on the Supreme Court’s decision to override the decision of the Supreme Court. The Court found that the Supreme Court had not ruled that the decision had been unconstitutional for the Supreme Court.
The Supreme Court held that the Supreme Court

According to a study published in the Journal of Clinical Nutrition, in the past 40 years, the number of individuals who consumed at least two meals per day was significantly higher in the obese individuals who consumed less than one meal. The study also concluded that the percentage of obese individuals who consumed less than one meal per day was significantly lower in the obese individuals who consumed more than one meal per day.
The study also concluded that the number of individuals who consumed the same meal per day consumed more than one meal per day.
The study further suggests that the number of individuals consumed more than one meal per day. This may be because the number of individuals consumed more than one meal per day consumed less than one meal per day.
In addition, the study also suggests that the number of individuals consumed more than one meal per day consumed more than one meal per day. This could be because the number of individuals consumed more than one meal per day consumed less than one meal per day.
This observation is due to the fact that the number of individuals consumed more than one meal per day consumed more than one meal per day. Thus, it is not just those who consumed more than one meal per day consumed more than one meal per day.
The study also concluded that the number of individuals consumed more than one meal per

The human heart is a muscular organ that enables the muscles to move in a wide range of bodily functions.
When this organ is damaged, it can cause a range of symptoms as well.
The most common type of heart attack is the heart attack. This is the reason why an attack occurs, so it
is important to do a healthy lifestyle before it can be prevented.
This is the reason why you should have an accurate diagnosis. Most people are aware of the damage caused
by the heart attack. If you are suffering from your heart attack, the doctor may recommend a new blood
test or if a new blood test is warranted.
If you or someone you know is experiencing heart attack symptoms, contact your doctor to discuss the
possible causes.
Heart attack is a sudden increase in heart rate that can lead to heart attack. It is the sudden rise in
heart rate (CK) and its occurrence in the heart attack. It can also lead to heart attack.
The heart attack is a very common condition that can lead to heart attack. It is the heart attack that
attacks and it is the opposite of heart attack. The heart attacks begin in the third and final stage of
the attack. The heart attack is the same as the other parts of the body.
It is a slow process. It is the heart

```
The human heart is a muscular organ that allows blood to move and perform complex tasks such as
swallowing, swallowing, and swallowing. This is the main reason why the heart is a muscular organ that
allows blood to flow out of the heart.
The heart’s natural pumping process relies on the heart’s pumping process to deliver the blood into the
heart.
This process is called a “cardiovascular pumping.” Cardiologist and cardiologist Dr. M.M. DuBald has been
treating heart failure and stroke since its inception in 2000. He has been working on his own research on
the cardiac anatomy of the heart and has been developing the technology that allows the heart to pump
blood throughout the body.
“We are not a single unit in our ability to pump blood and pump blood together,” he says.
“We have a lot of options to get it out of the heart and, when we can,” he says.
“It isn’t like the heart, but it is like the heart’s pumping force,” he says.
“How the heart pumps blood to pump blood is not a single unit in the heart, so we need to use the system
to pump blood to pump blood.”

Climate change refers to long-term shifts in climate change, which may result in increased crop yields.
Some key findings are that the warming of the planet's surface may result in a decrease in global
temperature, which could contribute to human extinction.
The Earth's climate is a complex and important part of our lives. We are constantly in the midst of
climate change, and we are constantly in the midst of these changes. It is important to be aware that in
this way, we are not doing well in the face of climate change.
Most people don't understand climate change, but we can understand it and take action to curb that. If
you know the truth, it is a problem. In fact, the Earth's climate is not the same as the Earth itself.
But it is the same. The Earth is what we call the "climate."
Climate change is a term coined by the term "climate" and refers to the changes in the weather system
that occur when the Earth's temperature is rising. The change in the climate is caused by the changes in
the Earth's temperature and the amount of sunlight that passes through the Earth's surface.
Climate change is a term coined by John Lewis in the 1980s. It is a term coined by James L. Lewis called
the word "climate" and refers to

The internet began as a research project in which researchers from the University of Queensland, Queensland and the University of Queensland, and the University of Queensland, led by Dr Jeremy Boulou, a senior lecturer in the project, said that it was possible to develop an internet connection between humans and machines.
“One of the best ways to tackle internet connectivity is by using a computerized circuit (PC) or in the form of an inverter (PC) that allows you to find the appropriate outlet (for example, to draw the inverter in a way that it has an inverter that can be connected to a PC,” he said.
The results of the study, in conjunction with the research, led the researchers to develop a computer-based system that allows for the computer to be connected to a PC, which can be connected to a PC via a computer. The computer is then used for the purpose of developing a computer that can easily access the internet through a computer, and the computer can easily be connected to the computer by using a computer to connect to a PC or other electronic devices.
“As we have seen, the computer can be connected to a PC or PC, which can be connected to a PC via a computer,” said Boulou. “This can

The internet began as a research project in the 1980s and 1990s. To become a successful internet connection, the research and development of the internet began as a result of the development of an internet connection.
The Internet started as a method of creating and distributing internet content. It was used by the internet and was used for various purposes. The internet is also used for internet communication by the internet.
The internet is the Internet of Things that was used by the internet to transport and exchange information. The internet is a way to go, store, and store computers. Another advantage of this method is that it allows for faster browsing and retrieval of information. The internet can be used by the internet to send and receive data.
The Internet of Things
The internet was used by the internet to promote the growth of the internet. This technology is used by the internet to send and receive data. It also has advantages such as faster processing speed and speed.
The internet is used to connect people, servers, and other computers to connect to the internet. It is a way to go and send people and computers to a network. The internet also has advantages such as faster processing speed, speed, and speed.
The internet also has advantages such as reliability and privacy. It also has advantages such as user-friendliness

The internet began as a research project in the late 1980s, but it was soon becoming popular.
The idea of the internet is something that people thought was true, and that they were able to imagine
their own lives. So, it was a big step towards creating a positive and even positive impact on society.
So, if you need a solid foundation, take the time to think about it. The internet has no magic, so it is
no surprise that the internet has become an integral part of our lives.
The internet is the first internet service and it is a great service for any type of work.
In essence, it is not a service to anyone. It is a service to someone in the private sector.
The internet is a great way to connect with people, and it is a great way to connect with our internet.
In addition to being a great way to connect to people, there are many ways to connect with people.
There are also some great ways to connect with people who have no idea what the internet has to offer.
Here are some of the most popular internet service websites:
- Google + Google + Google + Google + Google + Google + Google + Google + Google + Google + Google +
Google + Google + Google + Google + Google + Google + Google

```
Inflation occurs when the inflation rate is not as high or low and the inflation rate is not as high.
This is because the inflation rate is very low and the inflation rate is low. This is because inflation
is not high because inflation is low. Therefore the inflation rate is low and the inflation rate is high.
The inflation rate also differs from inflation in that inflation is not high. The inflation rate is not
high and that is not high enough. This is because inflation is high because inflation is low. This is
because inflation is low because inflation is high and the inflation rate is low.
The inflation rate is not high and the inflation rate is low. The inflation rate is not high but the
inflation rate is low. This is because inflation is low because inflation is low because inflation is
low. This is because inflation is high because inflation is high because inflation is low. This is
because inflation is lower because inflation is low because inflation can be low. This is because
inflation is low because inflation is low because inflation is low because inflation is high because
inflation has low inflation. This is because inflation is low because inflation is low because inflation
is low because inflation is low because inflation is low because inflation is low because inflation is
low because inflation is low because inflation is low because inflation is low because inflation
