Training run report: data320k-b8-t1024-e512h8-80k-lr6e-4-wu256k

Run `20260930-222012-13f3574-dirty-data320k-b8-t1024-e512h8-80k-lr6e-4-wu256k` · checkpoint `modal_data320k-b8-t1024-e512h8-80k-lr6e-4-wu256k_steps80000_seed42.pt` · generated 2026-10-09 17:21 UTC. A decoder-only Transformer language model (GPT-2 tokenizer, 50,257 tokens) trained from scratch; every number below is from the project's fixed evaluation harness, identical across models. Lower loss is better; the glossary at the end defines each metric.

Dataset: data320k

````
# data320k

Built 2026-09-30. Train is new; **val is data20k's, byte for byte**, the same
measuring stick as data20k, data40k, data80k and data160k.

| file | tokens | docs | sha256 |
|---|---|---|---|
| train.pt | 316,231,039 | 320,000 | `513239cc0b5b862af4cb53b0157573f9e3e9a6d08dab7ddde62a95869ec51b64`
|
| val.pt | 918,728 | 937 | `28b1041acaa527ac6d7e0a464b07115e766c5bf76252ecbc56a8519de02569ee` |

How it was made:

```bash
uv run mini-llm-prepare-data --num-examples 320000 --val-examples 1 --seed 0 --out-dir <tmp>
# keep <tmp>/train.pt; discard its 1-doc val
cp -p data/data20k/val.pt data/data320k/val.pt
```

Verified:
- data160k/train.pt is an exact prefix of data320k/train.pt (one seed-0 scan
  order: 20k ⊂ 40k ⊂ 80k ⊂ 160k ⊂ 320k).
- val.pt is identical to data20k/val.pt.
- 0 of the 937 val docs appear in train.pt
  (`python -m mini_llm.token_overlap data/data320k/val.pt --exclude data/data320k/train.pt`).

At the 327.68M-token budget (B8 × T1024 × 40K) this is ~1.04 passes, against
~2.06 over data160k at the same budget.
````

Glossary

metric	meaning
full_val@c	Mean next-token loss (nats) over every token of the fixed 918,728-token validation set, in windows of c tokens. Lower is better. full_val@1024 is the headline number.
L(c)	Fixed-target context curve: loss on the same 8,000 target tokens given exactly c tokens of history. Comparable across models at equal c.
cb@W	Context benefit: loss with the real preceding W/2 tokens vs. a prefix from a different document, on identical windows. Nats of help from relevant context (± standard error).
retrieval@d	Forced choice among 10 candidates (chance 10%): can the model pick the token that appeared d tokens earlier? Tests using information far back in context.
degenerate	Samples (of 100) that end in an exact loop OR have rep4 >= 0.5, with its 95% CI. The headline repetition number: exact loops alone miss repetition that never settles into a verbatim cycle.
rep4	Share of repeated 4-grams in a generated sample (0 = no repetition). Median over 100 samples; also counted at >= 0.3 / 0.5 / 0.7.
near-loops	Samples whose tail repeats: from some token on, every 64-token window has rep4 >= 0.5. Onset = where that tail starts (median).
exact loops	Samples (of 100) that end in a verbatim repeating cycle of at least 32 tokens, with its 95% CI. A strict subset of the degenerate samples.
topic held	Share of samples still mentioning the prompt's subject near the end of the 256-token generation.
distinct-2 / -4	Distinct bigrams / 4-grams over total, a diversity measure.
generation protocol	20 frozen prompts x 5 seeds, 256 new tokens, temperature 0.7, top-k 40, stop at EOS; identical for every model.

```
Albert Einstein was a German-born theoretical physicist who was not just a theoretical physicist but
also a scientist. His experiments and observations of Einstein's work were widely documented in the
United States.
He was the first person to study physics and to study quantum physics. He was a physicist that lived
with physicists and was born to a German family and had a family of children.
His experiments were not just theoretical physics. He spent the past two years on the Einstein–Soviet
theory of relativity. He was a German physicist and was a member of the German Academy of Sciences.
He was the first scientist to study quantum physics and was the first person to be born in Switzerland.
He was an active member of the German Academy of Sciences, and was a member of the German Academy of
Science.
He was the first person to be born in Switzerland. He died when he was six years old.
He was a physicist and was born in Switzerland. He was a young man who had lived before the age of
seven.
He was a physicist and was a member of the German Academy of Sciences. He was the first man to be born
in Switzerland.
He was a scientist and was a German physicist. He was the first person to be born in Switzerland, and

Albert Einstein was a German-born theoretical physicist who was born on November 22, 1913, on April 7, 1913, in the German Academy of Sciences, and was a Russian physicist and physicist who was born on December 1, 1917, in the German Academy of Sciences. Einstein's theory of relativity was based on the theory of relativity.
During the 1920s, Einstein was a physicist who was a cosmologist who was a physicist. Einstein was not a physicist but a theoretical physicist and a physicist who was a physicist and was a major scientist. In 1920, Einstein was the leading scientist and was a member of the Nobel Committee of the Soviet Union. Einstein was a member of the National Science Foundation and was a member of the scientific community whose scientific contributions were largely based on scientific research.
After the 1930s, the Soviet Union was considered a pioneer in physics and was a major figure. In 1920, Einstein was a member of the National Science Foundation.
Following the successful completion of the first scientific journal in 1930, to be awarded the Nobel Prize in economics, Einstein was awarded the Nobel Prize in economics and was awarded the Nobel Prize in economics and was awarded the Nobel Prize in economics and was awarded the Nobel Prize in economics and is a major figure in the field of science.
During the 1920s,

```
Albert Einstein was a German-born theoretical physicist who studied the universe and the universe. Einstein first was a German mathematician and physicist whose name was Isaac Newton. Einstein was a German mathematician who studied cosmology and physics.
The theory of relativity was based on a series of theories and theories, which were based on a series of observations, such as the discovery of Einstein's law, the discovery of the universe and the discovery of the universe. Einstein's theory also influenced many other aspects of the universe and the universe, such as its history, philosophy, and the philosophy of the universe.
What is the theory of relativity?
The theory of relativity is the study of the way that it was used to explain the ideas of the universe and the ways that it was used to explain the universe. Einstein's theory was a theory of relativity, which was first proposed by Einstein and then later wrote by Einstein in his famous book The Physical Theory of relativity.
What is the theory of relativity?
The theory of relativity is based on a series of observations, such as the discovery of the origin of the universe.
Why is the theory of relativity important?
The theory of relativity is based on the theory of relativity, which is based on the theory of the laws of classical physics.
What is

draw 4 · rep4 0.289 · not degenerate · topic held

```
Albert Einstein was a German-born theoretical physicist who became the first Einstein. Einstein did not consider Einstein's theory of relativity until the age of Einstein.
In his book, Einstein, the author of the book The Origin of Quantum Mechanics, discusses the contributions of Einstein and the theories of relativity.
One of the key contributions of Einstein's theory was the development of a theory that was not only about the nature of the universe but also about the study of objects and phenomena. Albert Einstein was not a physicist but one of the most important contributions of Einstein's theories was the development of a theory that led to the development of a theory of relativity.
The theory of relativity was a major development of a theory that was not only about the nature of the universe but also about the nature of the universe. Einstein's theory is clear and clear, but there is no evidence that Einstein's theory is a theory that is not only about the nature of the universe but also about the nature of the universe.
Another key contribution of Einstein's theory is the development of a theory that has a positive impact on how the universe is made. Einstein's theory is a fundamental point of view that is not only about the nature of the universe but also about the nature of the universe.
The theory

```
There are several benefits to regular exercise:
- Increased blood pressure: Low blood pressure can lead to a number of health problems, including cancer, diabetes and other types of cancer.
- Increased risk of heart disease: High blood pressure can lead to heart disease, heart disease, and other cardiovascular issues.
- Increased risk of heart disease: High blood pressure can lead to heart disease, stroke, and other cardiovascular problems.
- Increased risk of heart disease: High blood pressure can lead to heart disease, stroke, and other cardiovascular problems.
- Lifestyle changes: High blood pressure can also impact heart health, as it can raise cholesterol levels.
- Increased risk of heart disease: High blood pressure can lead to heart disease, which can be a sign of heart disease.
What is the best time to exercise?
The best time to exercise is to exercise. You can always follow the recommended exercise schedule, if you are still not exercising. However, if you are not exercising regularly, it is best to exercise every day. You can also use a small amount of exercise to improve your overall health.
- Lifestyle changes: High blood pressure can lead to a number of health issues, including obesity, heart disease, and cardiovascular problems.

There are several benefits to regular exercise:
-  Increased blood sugar
-  Decreased heart rate
- Increased insulin resistance
- Increased insulin resistance
What do you need to do with energy and nutrition?
The most important thing is to stay healthy. If you are exercising regularly, you'll need to stay active. However, for the most part, you should do some stretching of your muscles.
-  Increased muscle mass
-  Decreased muscle mass
-  Increased insulin resistance
- Muscle mass
-  Decreased body weight
-  Decreased weight
- Low sugar diet
- No eating enough
- Stress fractures
- Increased fatigue
- Low weight
What can you do to help with exercise?
If you are taking some exercise for a while, you might be wondering if you should exercise again for a while.
In addition to this, some exercise can also help you to feel more tired.
However, exercise can also be a beneficial part of improving your energy levels.
If you are having difficulty with exercise, then, take a few steps to improve the way you feel.
What are the benefits of exercise?
The benefits of exercise include:
- Increased energy
- Improved muscle strength
- Improved heart health
- Improved muscle flexibility

Although the treaty was signed in 1919, it was decided that the constitution would not be ratified by
the United States. The ratification of the Articles of Confederation was ratified by the United States,
and it was ratified by the United States, the United States and other states.
The United States was the first free-running federal government in the United States, and it was once
the first free-running federal government to be ratified by the United States, the United States, and
the United States. In 1918, the United States was the first free-running federal government in the
United States.
The United States is the first free-running federal government to be free of any political and economic
interests, while the United States is the third free-running federal government. The United States was
the first free-running federal government, the first free-running federal government, the first free-
running federal government.
The United States was once in the middle of the 20th century when the United States was first free-
running federal government, and the federal government was also called the second free-running federal
government. The state was formed for the first time in the state of the United States.
Today, the United States is a free-running federal government, which has been a popular choice for both
the state and federal governments.

According to a study published in the Journal of Infectious Diseases in the Journal of Infection, the authors found that in people who are exposed to certain chemicals in their clothing (such as pesticides) or during sex, the female genital organs are likely to be affected.
“Women are exposed to certain chemicals, like latex, which can affect their reproductive organs,” mentioned Dr. Karen D. W. H. Smith. “She is a highly sensitive woman. She is more sensitive to chemicals that interfere with the sperm and therefore her sperm production and reproduction. She is also sensitive to chemicals that interfere with sperm production, and is also sensitive to chemicals that interfere with sperm production.”
“Because of the low frequency of exposure to chemicals in the clothing, we believe that these chemicals interfere with sperm production,” Dr. A. W. H. Smith concluded in a study published in the journal Science. “It’s hard to know how they affect the female genital organs.”
The authors of the study, from the Institute for Health and Cancer Research, analyzed data from six women in the UK who were exposed to chemicals in clothing. The study also found that the female genital organs were exposed to certain chemicals in clothing.

environment: “Climate change refers to long-term shifts in”

draw 1 · rep4 0.083 · not degenerate · topic held

```
Climate change refers to long-term shifts in the development and growth of a species in the soil. The
decline in the soil yields the greatest loss to the soil as well as the most dramatic loss to the soil.
To reduce the carbon footprint, it is necessary to limit the use of fossil fuel extraction which is
necessary for the reduction of carbon dioxide and other pollutants in its atmosphere.
How to increase the carbon footprint
The most important thing that we can do is to add a few calories. The amount of calories you consume is
the total amount of calories stored in the atmosphere. By taking out the carbon footprint, you increase
the amount of waste it takes to landfills.
Achieving the correct balance is crucial for the climate. The amount of calories you consume and the
amount you consume is the most important thing that we can do for the planet. For example, if you are
going to use a lot of energy, you will have no more energy than the amount of fats you consume. You can
also reduce the amount of calories you take to landfills.
If you are spending more on food, you will have more calories that you can use. In addition to eating
more calories, you will have more calories to eat. You will also have less calories to eat.
How to conserve the carbon

Climate change refers to long-term shifts in the frequency of climate change. The longer-term impacts
of climate change are felt by the Earth and climate.
In a report, the International Institute for Applied Climate Change (IUCN) released the report on
climate change in the last three years, which is part of the IPCC report on climate change. The report
says that the global climate change impacts of climate change, and the effects of global warming,
especially on the environment, are not well understood.
"Climate change is a problem that impacts our environment, and that impacts our planet and the
environment. We have been able to see a new way for us to understand and help reduce greenhouse gas
emissions," said Professor David Cameron, senior research scientist in the department of Earth Science
and Technology, and lead author of the paper.
"We want to look for a new way to solve climate change problems," said Professor Cameron.
"Climate change is the kind of a problem that impacts our environment. It is a real problem that
affects our environment. To solve this problem, it is very important that we have a clear picture of
how the world works."
The report is published here by the National Science Foundation and the National Science Foundation.
- The National Science Foundation,

```
Climate change refers to long-term shifts in temperature and precipitation, leading to the growth of
populations in tropical areas. This increase in precipitation can lead to changes in the natural
systems that regulate rainfall patterns, such as rain or snow.
Impact on Climate
Climate change is a major concern that can affect rainfall patterns, particularly for those with the
most-affected population. For example, the increased levels of precipitation are due to the changing
seasons and the increasing seasons that occur in the north, particularly for the warmer regions of the
globe. This can lead to increased precipitation patterns and increased rainfall patterns in the region.
Climate Change can affect the natural balance of the natural balance of the earth, with extreme heat
events and the lack of protection for the natural processes and the need for a more sustainable future.
Climate change can affect the natural balance of the earth, as the weather shifts. For example, the
climate can affect the natural balance of the Earth and the seasons, with extreme heat events and the
rise of the Earth. For example, the climate can affect the natural balance of the earth, with changes
in temperature and precipitation patterns.
Climate change can also affect the natural balance of the earth, as the temperature changes. For
example, the temperature may affect the natural balance of the earth, while the temperature may affect
the

The internet began as a research project in the 1980s.
As new technology is in place of the big tech.
With that in mind, internet is a huge platform. With an internet of things, internet has become a popular method of communication and communication. It has come to be one of the most popular tools for online communication.
To do this, you can use the internet to communicate your messages.
How Internet is Web?
Web is a great way to learn, learn, and learn. A website could go a long way in the morning, when you feel your internet is opened.
What is Web?
Web is a broad term that describes the idea of a website. It encompasses a set of information and features in a website. Web is a set of information which can be used to create a website.
Informal web refers to the collection of information that is being used to create a website. It encompasses the entire collection of information that is being used to create a website.
There are many different types of Web, each with its own advantages. It is a set of information which can be used to create a website.
The various types of Web are used in different ways. There are three types of Web:
- Web and Web
- Web: Web is

The internet began as a research project in the US, which allowed for the proliferation of mobile
phones.
The research on mobile phones has been ongoing since the beginning of the 1950s. The study of mobile
phones was a large part of the global mobile population. The research also showed that the mobile
phones were a large part of the population that is growing exponentially in the last decade.
In the past, the research of mobile phone technology has become a source of controversy and debate
among researchers. The research of mobile phones is a big part of the larger population that has been
growing since the 1980s.
In the past, mobile phone technology has become a major concern. One has to work together to create a
new mobile phone. The research has been conducted by researchers from the University of Maryland and
the University of Maryland.
In the past, mobile phone technology has also been used to provide a number of benefits to the mobile
industry. These benefits include:
- The mobile phone industry has become a major contributor to the growth of mobile phone technology.
With the increasing adoption of mobile phones, the demand for mobile phones has increased by about a
third and a third. However, it has also been seen that mobile phones have been a major contributor in
the growth of mobile phone technology.
- The mobile phone industry has developed

The internet began as a research project in the late 1960s, but the research that was not funded by the
Internet has made it clear that the internet was not entirely accessible. The Internet was not entirely
accessible but an internet was not accessible to anyone else, and the internet was not accessible.
The Internet and the Internet were no longer limited to the internet, and the Internet was not
accessible to anyone. The internet was not accessible for anyone, and the internet was not accessible
to anyone. The Internet was not accessible to anyone, and the internet was not accessible and it was
not accessible to anyone.
Another problem is the introduction of the Internet. There is no need for the Internet to be accessible
to anyone, and the Internet was not accessible and the internet was not accessible to anybody.
The Internet was not accessible to anyone, and the internet was not accessible to anyone, and the
internet was not accessible to anyone. The internet was not accessible to anybody, and the internet was
not accessible for anyone. The internet was not accessible to anyone, and the internet was not
accessible to anyone — and the internet wasn't accessible to anybody.
The Internet was not accessible and the internet was accessible to anyone, and the internet was not
accessible to anyone, and the internet was not accessible to anyone. The internet

economics: "Inflation occurs when"

draw 1 · rep4 0.19 · not degenerate · topic lost

```
Inflation occurs when a player loses a certain amount of money, and the other person's risk is not
equal to the number of people who are doing the work, but rather than making it a payment or not doing
it.
When a player loses money from a business, they won't be able to pay their salaries or pay a certain
amount of money. In theory, a player loses their jobs and their money is not enough.
A player loses money from a business, and the other person will lose money by buying a lottery ticket.
It's important to know the amount of money you will earn and what you're winning.
A player loses money from a company, or a player loses money from a business, or a member of a
corporation. This can mean that each player loses his or her money because of his or her ability to pay
a specific amount of money.
A player can lose money from a business, or a player loses money from a business, or a member of a
corporation. A player can lose money by following the instructions or by having a good credit score.
A player loses a certain amount of money, and the player will lose their money because of the value of
the game. The player has to keep the game

Inflation occurs when a large number of new products are produced at the expense of consumers. In the
case of a product, the consumers are likely to have a better chance to buy their products and therefore
have a better chance of being sold.
In the case of a product, consumers are likely to have more options to buy their products. Consumers
will be able to buy their products in the form of a liquid.
According to a study published in the journal Consumer Reports, the average price for the product is a
$2.2 billion, or $2.3 billion. The consumer price of a product is higher than the price of an
individual, while at the same time, the market is likely to increase.
This is a new study published in the journal Consumer Reports. The researcher concluded that the price
of a product is the only factor in determining the potential of a product. The new study also indicates
that a large number of new products are produced at the expense of consumers.
The study also found that the rate of inflation reached the level of inflation of the product. At the
same time, consumers are expected to have more options to buy their products and therefore have fewer
options to buy their products and therefore have less options to buy their products and therefore have
less options to buy their products
