Training run report: data640k-e768h12l8-160k-lr3e-4-rope-fused-cont30k-rlr5e-5

Run `20261009-011729-2472dd1-data640k-e768h12l8-160k-lr3e-4-rope-fused-cont30k-rlr5e-5` · checkpoint `modal_data640k-e768h12l8-160k-lr3e-4-rope-fused-cont30k-rlr5e-5_steps30000_seed42.pt` · generated 2026-10-09 17:21 UTC. A decoder-only Transformer language model (GPT-2 tokenizer, 50,257 tokens) trained from scratch; every number below is from the project's fixed evaluation harness, identical across models. Lower loss is better; the glossary at the end defines each metric.

Dataset: data640k

````
# data640k

Built 2026-10-02. Train is new; **val is data20k's, byte for byte**, the same
measuring stick as data20k, data40k, data80k, data160k and data320k.

| file | tokens | docs | sha256 |
|---|---|---|---|
| train.pt | 632,350,143 | 640,000 | `6cdba9bb31652e5e70cfcc141f2a2060fd39297e1547c68f8ace8583116fa12d` |
| val.pt | 918,728 | 937 | `28b1041acaa527ac6d7e0a464b07115e766c5bf76252ecbc56a8519de02569ee` |

How it was made:

```bash
uv run mini-llm-prepare-data --num-examples 640000 --val-examples 1 --seed 0 --out-dir <tmp>
# keep <tmp>/train.pt; discard its 1-doc val
cp -p data/data20k/val.pt data/data640k/val.pt
```

This is the first dataset that needed the streaming `prepare_dataset` (rows
tokenized during the scan into int32 chunks). The old version held every token
as a Python int, ~20+ GB at this size. Output is unchanged: a 2,000-doc run of
the new code is an exact prefix of data320k/train.pt, and train.pt here was
built with the same scan, split and tokenization.

Verified:
- data320k/train.pt is an exact prefix of data640k/train.pt (one seed-0 scan
  order: 20k ⊂ 40k ⊂ 80k ⊂ 160k ⊂ 320k ⊂ 640k).
- val.pt is identical to data20k/val.pt.
- 0 of the 937 val docs appear in train.pt
  (`python -m mini_llm.token_overlap data/data640k/val.pt --exclude data/data640k/train.pt`).

train.pt is 5.06 GB on disk (int64). Training memory-maps it by default, so it
needn't fit in RAM; Modal runs read it fully (`--tokens-in-ram`). Upload with
`uv run --group modal modal volume put wiki-llm-data data/data640k /data640k`.

At the 327.68M-token budget (B8 × T1024 × 40K) this is ~0.52 passes, against
~1.04 over data320k at the same budget.
````

Glossary

metric	meaning
full_val@c	Mean next-token loss (nats) over every token of the fixed 918,728-token validation set, in windows of c tokens. Lower is better. full_val@1024 is the headline number.
L(c)	Fixed-target context curve: loss on the same 8,000 target tokens given exactly c tokens of history. Comparable across models at equal c.
cb@W	Context benefit: loss with the real preceding W/2 tokens vs. a prefix from a different document, on identical windows. Nats of help from relevant context (± standard error).
retrieval@d	Forced choice among 10 candidates (chance 10%): can the model pick the token that appeared d tokens earlier? Tests using information far back in context.
degenerate	Samples (of 100) that end in an exact loop OR have rep4 >= 0.5, with its 95% CI. The headline repetition number: exact loops alone miss repetition that never settles into a verbatim cycle.
rep4	Share of repeated 4-grams in a generated sample (0 = no repetition). Median over 100 samples; also counted at >= 0.3 / 0.5 / 0.7.
near-loops	Samples whose tail repeats: from some token on, every 64-token window has rep4 >= 0.5. Onset = where that tail starts (median).
exact loops	Samples (of 100) that end in a verbatim repeating cycle of at least 32 tokens, with its 95% CI. A strict subset of the degenerate samples.
topic held	Share of samples still mentioning the prompt's subject near the end of the 256-token generation.
distinct-2 / -4	Distinct bigrams / 4-grams over total, a diversity measure.
generation protocol	20 frozen prompts x 5 seeds, 256 new tokens, temperature 0.7, top-k 40, stop at EOS; identical for every model.

Photosynthesis is a process that occurs after the plant leaves it to produce ATP. When the plant leaves the glucose, the plant reacts with the glucose, and so does the plant's reaction to the glucose, the plant's reaction is like that:
The enzyme in the plant is called glycolytic acid. It's a fatty acid that is formed when the plant's sugar is broken down to produce energy. It is a fatty acid that is broken down by a process called lipogenesis. Lipogenesis is a process where the plant's sugar is broken down and the plant's sugar is absorbed by the plant's tissues.
This process happens when the plant's sugar is broken down by a process called glycolysis. To make glucose, the plant breaks it down, and the plant's sugar is absorbed by the plant's tissues. The plant's sugar is then absorbed by the plant's tissues.
The cell's reaction to the glucose is called photosynthesis and the plant's reaction is called photosynthesis. The plant's reactions to the glucose are called photosynthesis, and the plant's reaction to the glucose is called photosynthesis.
Photosynthesis is a process where the plant's sugar is absorbed by the plant's tissues. Photosynthesis is a process where the plant's sugar is absorbed by the

```
Photosynthesis is a process that involves the breaking down of a larger molecule into smaller components.
The word "cell" is derived from the Greek word "cella" and was used to describe the organisms that live in
the ground. It is also used in the Greek word "gene", which means "skeleton", and "bacteria" in the Greek
word "bacteria".
It is believed that the life of a plant was influenced by the way that plants evolved. The plant evolved
from an ancestor of a plant-eating plant-eating ancestor.
In the past, many scientists have studied the structure of plants and discovered new ways to explain their
evolutionary history. This includes the ability to sense the structure of the plant's cells.
It is believed that these structures are adaptations to the changing environment of the plant. This is
because the plant has evolved to adapt to the environment and to thrive in a particular environment.
This is also one of the reasons why plants are known to be herbivores. The plant has a very large surface
area and is able to use light energy to grow. Because of this, plants are commonly used for heating and
cooling.
It is believed that the plant has evolved into a form of plant-eating. This can be achieved by introducing
seeds into the

biography: "Albert Einstein was a German-born theoretical physicist who"

draw 1 · rep4 0.273 · not degenerate · topic held

```
Albert Einstein was a German-born theoretical physicist who demonstrated the quantum field as a discrete,
observable phenomenon. His contributions to science and mathematics were instrumental in shaping his
theories and his method of scientific discovery.
In the late 1920s, Einstein was interested in the relationship between the electric field and the electric
field, and he believed that the field had a definite and measurable relationship with the electric field.
Einstein, who was a scientist, could not be said to have known about his theories. He believed that the
electric field was responsible for the transfer of energy across the electromagnetic spectrum.
In the 1920s, Einstein began to work on the theory of relativity. He believed that the electromagnetic field
could not be explained by a single force, but rather by a single force acting on it. He believed that the
electric field had a definite and measurable and measurable relationship with the electric field, and he
believed that the electric field could not be explained by a single force, or by a single force acting on
it.
In 1925, Einstein published his first paper on electromagnetism, which concluded that the electric field had
a definite and measurable and measurable and measurable relationship with the electric field. In 1925,
Einstein published his work on the theory of relativity, which he believed that the electric field had a
definite and measurable and measurable and measurable and

```
Albert Einstein was a German-born theoretical physicist who was born on November 18, 1905, in Munich,
Germany.
He received his bachelor's degree from the University of Munich in 1911 and the doctorate from the
University of Paris in 1913. He is best known for his work on the electric field, which he believed to have
made a measurable contribution to the theory of relativity.
In 1911, Albert Einstein was awarded the Nobel Prize for Physics.
In 1931, Albert Einstein was awarded the Nobel Prize for Physics. In 1936, he was awarded the Nobel Prize
for Physics.

Albert Einstein was a German-born theoretical physicist who believed that the universe could be made from a mixture of atoms. He believed that, while it was impossible to create a single atom, the only way to create it was through a simple process of dissolving matter. In the next chapter, Einstein discussed the possibility that the universe could be made by atomic particles.

Albert Einstein was a German-born theoretical physicist who became one of the foremost scientists of his time. He was particularly interested in the concept of atomic energy and the idea of a theory of gravity. He was also a member of the European Academy of Sciences which was founded in 1891.
In 1886, Einstein was elected president of the Academy of Science which was established in Berlin. He was also a member of the European Academy of Sciences which was formed in 1889. His name was changed to Einstein to Albert Einstein by the German physicist Friedrich Albert Einstein.
A Brief History about Einstein
The Facts About Einstein
- Einstein’s birthday is celebrated every year on March 22, 2020.
- The Einstein Day Parade is held in the city of Basel in Switzerland.
- The Einstein Memorial is located in the city of Basel.
- It is a day to remember all the people who helped Einstein.
- The world’s largest city is located in the city of Zurich.
- The Einstein Memorial is located in the city of Berlin.
- The Einstein Memorial is located on the grounds of the Berlin Memorial.
- The Berlin Wall is the largest city on Earth.
- The Einstein Memorial is located in the city of Munich.

Albert Einstein was a German-born theoretical physicist who became the first person to understand the laws of quantum mechanics, which he called quantum mechanics. He was also the first person to observe the behavior of quantum particles, which he called quantum-mechanical interactions.
Albert Einstein (1858-1934) was born in Germany, in 1904. The youngest child of a Polish-born physicist, Albert Einstein, and his wife, Marie-Monique, the child was a German physicist and a German physicist. Einstein, though, had a difficult time with chemistry, and his mother was a chemist in high school. Einstein was educated at the University of Zurich in 1891 and went on to work with physicists in Berlin, the first of which was in Paris. He was the first to study quantum mechanics, and he began to study the behaviour of quantum particles. He became interested in the way elements in atoms work, and he also began to study the interactions between energy and matter.
In 1892, Einstein was elected to the Royal Academy of Sciences in Paris. He was elected to the Academy of Sciences and the Academy of Sciences in Geneva, Switzerland. When the Academy was formed in 1892, he was elected to the Academy of Sciences. He was awarded the Nobel Prize in Physiology, and his family name was Nicholas

Oxygen is a chemical element with symbol Oxy-G. Oxygen molecules are the most abundant chemical elements in
nature. Oxygen atoms are the building blocks of most chemical reactions.
What are the characteristics of Oxygen?
Proteins Oxygen is the chemical element with symbol Oxy-G. Oxygen molecules are the building blocks of many
chemical reactions.
How is Oxygen made?
The main characteristics of Oxygen are its chemical makeup (oxygen can be found in all living things), its
chemical composition (oxygen can be found in every living thing), its chemical structure (oxygen can be
found in most living things), its chemical composition, its color (oxygen can be found in all living
things), and its chemical structure.
How is Oxygen made?
The chemical makeup of Oxygen is different. Oxygen is made of many elements: oxygen, carbon dioxide,
hydrogen, oxygen, hydrogen, and carbon dioxide. Oxygen is made of three main elements: nitrogen, oxygen, and
carbon. The chemical composition of Oxygen is mainly nitrogen.
What are the four types of Oxygen?
The four major types of Oxygen are Oxygen, Hydrogen, Oxygen, and Carbon. Oxygen is the most abundant
chemical element in the Earth’s

Although the treaty was signed in 1919, it would have been a costly affair for the state.
The treaty, signed in 1921, was a major step in the fight for the abolition of slavery. It meant that many slaves could not be reared off of their families and that most had to be freed, or enslaved, or forced to be freed.
The United States was also a country that was divided in two, and the two states that were separated did not share a common history.
The U.S. was a country that was divided by two: the United States of America, which was split into two, and the United States of America, which was split into two: the United States of America and the Soviet Union.
The U.S. was split into two: the Soviet Union and the Soviet Union. The Soviet Union had a communist government that was split into two: the Soviet Union and the Soviet Union.

According to a study published in the journal Nature, this study was conducted by the University of Adelaide, South Australia, in collaboration with the Australian National University. The results showed that the team’s findings were consistent with those of the study, which was published in the journal Nature.
The team followed the methodology used in the study, which was followed up and analysed using standard software packages and data analysis software. The researchers concluded that the study is “highly reliable” and that the findings are not only applicable for Australian researchers, but also for the public.
“Our findings suggest that the team is confident that the findings will be applicable to Australian research,” said Dr Stephen MacPherson, a postdoctoral researcher at South Australia, who has also worked in the field as a postdoctoral researcher at the University of Adelaide.
“Our study is unique in that the method used is not only reliable but also valid for the public. The results are also consistent with those published by the Australian National University,” said MacPherson.
While the study is unique in that it is the first time that a single sample has been analyzed, it will be difficult to determine whether the team is accurate in its results, which is a matter of debate and we are confident

According to a study published in the Journal of Infectious Diseases in the journal, the use of high-tech technology for treating infection in the developing world is still in its early stages, with efforts now being carried out throughout the world. This is due to the fact that the use of technology has expanded, but it is still a major focus of research and development. However, it is still a long way from the current use of technology, and research is still ongoing.
The future of healthcare
The ability of healthcare is a crucial component of modern healthcare. The use of technology is likely to continue to expand, but it is expected to continue to improve and expand in the coming years. This will be a crucial step towards more effective and effective healthcare.
According to a study published in the Journal of Infectious Diseases, the use of high-tech technology in healthcare could potentially lead to significant improvements in the treatment of infections, including the prevention of infections. This could be achieved through the use of technology that is less invasive and less invasive. It is expected that healthcare will continue to expand and expand, but it is expected that the use of technology will play a significant role in the development of new technologies and strategies for managing infections.
The future of healthcare
The use of technology in healthcare is expected to

According to a study published in the journal Nutrients International, some experts suggest that the plant may have a beneficial effect on the growth.
Researchers from the University of Illinois at Chicago, the University of Illinois at Chicago, and the University of Texas at Austin have studied the effects of vitamin K on the growth of the plant. They looked at the response of the plant to the presence of vitamin K, and found that the plant might have a beneficial effect on the growth of the plant.
It is also interesting to note that the plant is not only a food source for plants, but also a source of energy for the entire ecosystem. The plant, which is also found in the ground, is a source of energy that helps to maintain a healthy balance of the ecosystem. It also serves as a fuel for the carbon-rich soil.
The plant is also known for the health benefits it provides by supplying oxygen and nutrients to the plant. It also is a source of energy for the brain and nervous system, which helps to regulate the heart rate and breathing.
The plant, which is also found in the ground, has a high bioavailability and is a food source of nutrients. The plant is also a source of energy for the body, and also a source of energy for the brain and nervous system.

According to a study published in The British Medical Journal, in 2002, men who were treated for a stroke reported higher rates of heart attacks, compared to women who were treated for a stroke.
The team found that women who had used a pacemaker during pregnancy had a lower heart attack rate than those who were treated for a stroke.
"The findings are an important addition to the evidence base for prevention and treatment of cardiovascular disease and stroke, and also a strong evidence base for the long-term treatment of cardiovascular disease," said Paul D. DePens, MD, lead author of the study and the study's lead author.
The researchers analyzed data from a total of 6,827 women with a stroke in France in the period from 1996 to 2003.
"We found that women who were treated for a stroke had a higher odds of heart attack and heart attack, compared to those who were treated with a pacemaker," said DePens.
The researchers found that stroke risk was higher in women treated for a stroke.
The researchers found that a stroke risk of up to 72 percent was greater in women treated for a stroke than in men.
"This finding is an important step toward preventing cardiovascular disease and stroke in women," said DePens.
The researchers examined data from

According to a study published in the journal Science, the levels of protein and fat in the blood were more similar to those in subjects with normal blood cholesterol levels.
The researchers also found that the higher levels of protein in the blood were more likely to affect the heart and blood pressure, as well as the blood pressure in the lower group. The scientists also found that the level of protein in the blood was higher in those with a normal blood cholesterol level.
"We can see that the level of protein in the blood is higher in people with normal cholesterol levels because of a certain genetic risk," said Dr. Robert E. Winton, a cardiologist and professor of medicine at the University of Georgia Medical Center in Atlanta.
The study was published in the journal Molecular Cell.

The human heart is a muscular organ that pumps oxygen and nutrients through the bloodstream to the body. The heart is primarily designed to pump the oxygen through the bloodstream. However, not all heart disease is caused by the same underlying condition.
Other common conditions that can cause heart disease include high cholesterol levels, high blood pressure, high cholesterol levels, and cholesterol levels that can be a source of pain and inflammation.
What Does Heart Disease Look Like
While heart disease is generally considered a silent disease, it can be a life-threatening condition. It can affect your heart, lungs, and blood vessels. It can also affect your heart, leading to a heart attack and other symptoms.
What Is Heart Disease in a Normal Heart
People with heart disease often experience a variety of symptoms, such as chest pain, shortness of breath, heart palpitations, and chest pain. These symptoms can be a symptom of a heart attack or a heart attack.
However, not everyone experiences heart disease. Some symptoms may include:
- Aching, burning in the chest, and/or difficulty breathing
- A racing heart
- Shortness of breath
- Pain or discomfort in the chest
If you experience any of these symptoms, it’s important to seek medical attention immediately.

Climate change refers to long-term shifts in climate and the ability of people to adapt to new climate
conditions.
In addition to extreme weather, climate change is also a serious threat to the natural climate system and to
vulnerable populations. Climate change has the potential to disrupt migration patterns in many parts of the
world, including Asia, Africa and South America.
Climate change also has negative impacts on health and development, such as increased risk of cardiovascular
disease, increases in mortality from infectious diseases, and reduction in the availability of quality
health care.
Climate change also affects food production and distribution, as well as the natural environment. Adaptation
to climate change requires adaptation to the changing climate. Research has shown that climate change can
have detrimental effects on food production and distribution.
The impacts of climate change on agricultural production and consumption are complex and multifaceted.
Agriculture and climate change may have negative impacts on public health, food security, and the
environment, but they are also important.
The effects of climate change on food production are multifaceted and multifaceted. The impacts of climate

Climate change refers to long-term shifts in the Earth's climate.
The effects of climate change are more uncertain than other natural phenomena. It has been estimated that climate change will increase the global average temperatures by more than 40 degrees Celsius over the last 30 years and that the planet will become increasingly warmer by 2060. The world's average temperature will rise by about a third over the next decade. As a result, many of the current global temperatures will be warmer than the average for decades.
This year, the IPCC has predicted that the Earth will be warmer by a third over the next decade. The increase in the average temperature of the Earth's surface is expected to increase the temperature of the Earth's surface by a third. That means that the planet will be warmer by a third over the next century. The increase in the average temperature of the Earth's surface will be about a third over the next decade.
The Intergovernmental Panel on Climate Change (IPCC) is a group of independent agencies that is responsible for the science and policy of the United Nations. The Commission has been responsible for the protection of human rights, including the protection of children, and the protection of human rights, including the protection of the environment. William Shakespeare wrote many plays, including Shakespeare's Hamlet and the play of William Shakespeare.
Shakespeare was an Englishman, his first wife, a poet and his love of the city life and his father's passion
for his wife and children. He was a writer, his wife, and a great lover. Shakespeare wrote more than 500
plays, most of them in English. He was an English writer, a poet, a writer, and a poet.
In Shakespeare's time, Shakespeare was a man of many talents. His most famous plays were comedies, comedies,
and comedies. He was the only poet to be credited with writing many plays, including Shakespeare's comedy
Hamlet. His comedy Hamlet and the tragedy Hamlet and the tragedy Hamlet are both classic works of
Shakespeare's time. In this essay, I will be focusing on the history of Shakespeare.
1. Hamlet and the play Hamlet is a play by William Shakespeare. It is a play written by William Shakespeare,
and is regarded as one of the best plays of the twentieth century. It is written by William Shakespeare and
is about a man who has a love for Shakespeare. The play is considered to be one of Shakespeare's most
popular comedies, and is seen as one of the greatest tragedies of all time. Shakespeare

The internet began as a research project in the 1960s, and became one of the most popular internet sites.
The first Internet research project in the history of the internet began in the early 1980s with the
invention of the World Wide Web.
In the 1980s, the Internet began to be used by the average person to communicate with each other.
The Internet was initially used to connect people with other organizations, such as the World Wide Web, but
it was also used by the United States and other countries such as the United States, which were the first to
use the Internet.
The Internet began to be used by scientists, engineers, and researchers across the world.
The Internet has been used almost daily for research and education.
The Internet has revolutionized the way people talk, view information, and solve problems.
The Internet has revolutionized the way people communicate with each other, and it has made communication
more efficient.
The Internet has transformed the way people communicate with each other, and the Internet has become a
platform for communication in the 21st century.
In 2001, the Internet became a global communication platform.
The Internet has become a global phenomenon and has become a global phenomenon.
The Internet has helped to shape the Internet, but it has also made a huge impact on the

The internet began as a research project in the mid-1960s, and the internet became a tool for both
researchers and historians to examine the past and present. They were able to discover the history of the
internet and its evolution in history. The internet has provided a fascinating insight into the world of
science while also providing a glimpse into the past.
The use of the internet has become popular in the past few years, and there is a lot of research and study
to be done. For example, researchers have found that the internet has changed the way we view the world. The
internet has opened up new avenues for research and learning, and the internet has also opened up new
avenues for research and discovery. The internet has also provided a new way to explore and study the world,
and the internet has paved the way for new technologies and technologies.
The internet has also played a significant role in the development of the internet. The internet has
revolutionized the way people live and work, and the internet has transformed how we live and learn. The
internet has provided a powerful tool to study and study the past, and the internet has provided a new way
for people to study and study the past.

The internet began as a research project in the early 20th century, but it has since become a valuable
source of information for scientists today.
The internet has also seen a resurgence in the amount of research that has been done on the world's most
basic needs. The internet has helped to bring in a whole new world of knowledge, but many people still
wonder about its importance.
In the past, the internet has been considered a great tool to help with research and development, but today
it has become a way for researchers and scientists to access information that is not always available.
There are many benefits of using the internet to support research and development. It has also become a
source of information for researchers and the public in general.
For example, the Internet has helped researchers in many fields to gain access to information in ways that
are not easily accessible to the general public.
It has also helped scientists to understand the needs of people in different parts of the world.
It has helped to keep researchers up-to-date and help fund research projects that benefit people in many
different parts of the world.
But it is not just the internet that has helped scientists to discover new information about the world
around them.
It has also helped to create a new kind of knowledge for scientists to research.
The

The internet began as a research project in the late 1960s, but the effort was hampered by the early 1950s.
The U.S. government began to invest in the internet in the early 1960s but the U.S. government was still
able to fund it. The internet was a new era and this was the era when it was the first web presence using
the internet. Although the internet was being used in the first decades of the 20th century, the internet
was never used as a new tool for the internet. The internet was first used to access news, information, and
pictures. It was not until the late 1960s that the internet became a means of communication and
collaboration.
It’s a big part of the internet. The internet was born out of the idea that the internet was a tool for
sharing information and information. This was the first time it was used to access information on the
internet. The internet was used to connect people and keep them connected. It was also used to connect
people to a variety of media such as radio, television, and newspapers. The internet was used to connect
people using the internet. For a long time, the internet was used to connect people with other people. The
internet was used to connect people to different websites and websites. The internet was used to
